EDUCATION

University of Cambridge

2021 - 2022

MPhil in Advanced Computer Science

- Pass with distinction with 81.20% GPA.
- Awarded the £5,000 ACS MPhil Scholarship for academic excellence.
- · Researched geometric DL for molecular graphs (drug discovery) supervised by Prof Pietro Liò & Dr Cristian Bodnar.

University of Manchester

2018 - 2021

BSc Computer Science and Mathematics

- · First Class Honours with 83.36% GPA.
- · Awarded Certificate of Excellence for top 10% graduating students.

EXPERIENCE

MATS: Foundations of Mechinterp (Lee Sharkey) - Researcher

May 2023 - Jan 2024

- Investigating "Attention Head Superposition" in language models with Chris Mathwin and Lee Sharkey.
- Discovered how certain properties of the model affect model performance.
- Facilitated Alignment 201 reading group for 5 MATS scholars.

ARENA June 2023

- Self-studied Redwood Research's MLAB curriculum to work as a TA (for the mechanistic interpretability chapter) and as a participant (for the training LLMs at scale chapter) for ARENA (Alignment Research Engineer Accelerator).
- Aided participants on examining and interpreting Indirect Object Identification, balanced bracket classification, superposition, and OthelloGPT.

MATS: Mechanistic Interpretability (Neel Nanda) - Researcher

Nov 2022 - Jan 2023

- Applied the original and extended logit lens to the IOI task across a set of GPT-2 sized models (extended DLA).
 Extended logit lens uses consecutive layers at the end of the model to map the residual stream to logit space.
- Found the tendency for certain models (e.g. GPT-Neo) to "flip" i.e. assign an *extremely low probability* throughout the model to the token that it will eventually output and used extended DLA to analyze how this tendency changes.

CancerAl (University of Cambridge) - Research Assistant

Jul 2022 - Oct 2022

- Researched explainable AI for use by clinical oncologists using Tensorflow and PyTorch.
- Developed front-end for VIIDA, an application for analyzing, modelling, explaining, and predicting cancer-related data with Flask and React.

Cambridge Cancer Genomics - Software Engineer Intern

Jun 2019 - Sep 2019

- · Integrated features and fixed bugs for the precision oncology platform OncOS backend using Python and Flask.
- Built a full-stack internal monitoring system for OncOS infrastructure to manage genomic data and processes.
- Researched variational autoencoder algorithms related to DNA sequence compression for SomaticNET, a neural network for evaluating tumor variants, using **Tensorflow (Python)**, **Bash**, **pysam** and **Annoy**.

PROJECTS

Geometric CW Networks - MPhil Thesis

2021 - 2022

- Introduced geometric inductive priors [E(3) invariance and equivariance] to a GNN with a topological inductive prior, in this case CW Networks (CWNs), an architecture in which graphs are "lifted" into higher order hypergraphs using CW complexes, to construct Geometric CW Networks (GCWNs).
- · Used PyTorch, PyTorch Geometric, gudhi.

Topological Neural Processes - BSc Thesis

2020 - 2021

Built a novel machine learning model for extracting latent information of topological structures of input (topological data analysis) for Conditional Neural Processes (a neural model which meta-learns a stochastic process) using Tensorflow, matplotlib, pickle, gudhi, and numpy; supervised by Dr Tingting Mu and Dr Cristian Bodnar.

LEADERSHIP

AI Safety Facilitator and Tutor

2023

• Facilitating AI Safety Fundamentals 101 and 201 reading groups and tutoring for MLAB/ARENA (including my modifications for Anki support) for MATS research fellows and graduates from the University of Cambridge.
